

# Momina Liaqat Ali's Zoom Meeting

## Quick recap

The team discussed the final stages of their project, including the addition of a README file and analysis components to their GitHub repository. They reviewed the inclusion of figure captions in their last report and discussed the interpretation of visualizations, identifying both effective and misleading representations of data. The group confirmed that individual reflections were still needed, and Suchitra mentioned she would upload her coding part shortly. They agreed to upload AI summaries rather than full Zoom transcripts to GitHub due to privacy concerns, and discussed the creation of a PowerPoint presentation for class, which Momina would handle after her classes concluded.

## Next steps

- Momina: Add the README file to the GitHub repo.
- Suchitra: Upload the coding part to the repository.
- All team members: Complete individual reflection assignments.
- Momina: Check the report for issues and plagiarism, and notify the team if any problems are found before submission.
- Momina: Upload the AI summary to the repository.
- Team (or Momina if others do not): Prepare the PowerPoint presentation for class (to be completed after 4pm tomorrow if Momina does it).

## Summary

## Project Progress and Updates

The team reviewed their project progress, confirming that most components were complete. Momina noted that the analysis part had been integrated into the images instead of being in a separate folder, which Satvick had updated. They discussed adding a README file to the GitHub repository and completing week B's AI summary. Suchitra and Satvick agreed to review the project for any missing elements and reminded each other about submitting individual reflections.

## Figure Captions in Reports

The team discussed the absence of figure captions in their last report, which was confirmed by Suchitra and Satvick to be an EDA report. Momina inquired about the inclusion of captions in previous reports, to which Satvick clarified that they had not included any figure captions. The conversation ended with Satvick asking Momina to explain why a particular aspect was misleading, but the explanation was not captured in the transcript.

## Data Visualization Quality Discussion

Satvick and Momina discussed the quality of visualizations in their report, focusing on distinguishing between misleading and accurate representations of data. Momina explained the rationale behind certain visualizations, such as survival rates and fare thresholds, and emphasized that the choice of attributes for visualization was theirs to make. They agreed that while some visualizations were intentionally designed to highlight specific data points, others could be manipulated to appear misleading, given the absence of significant missing values in the dataset. Suchitra confirmed that her section was free of plagiarism, and Satvick noted that the report was finalized.

## AI Summary Report Submission Review

Momina confirmed that all necessary links have been copied and the AI summary report is ready for submission, pending review of responses. Suchitra and Satvick discussed whether to upload the Zoom transcript, but Momina clarified that only the AI summary is required as per the instructor's instructions.

## Transcript Upload and Presentation Planning

The team discussed uploading meeting transcripts and PowerPoint presentations, with Momina explaining that transcripts cannot be uploaded to GitHub due to its public nature. They agreed that if requested, transcripts could be sent via email instead. Momina mentioned she would work on the PowerPoint presentation after her classes, which is intended for the class presentation and does not need to be uploaded to GitHub.
